---

Tested on another server with software raid and similar  
raid1 installation warnings. The server freezes at start  
of GRUB initialization, i.e.

GRUB...

And I never changed the Grub kernel boot option, so I thought  
at least I would have had the option to select which kernel  
to boot from the GRUB screen.

Strange.

I will try upgrading to Centos 4.3 and see if that changes  
anything.

Regards
