Subject: *SOLVED* ovzkernel-smp doesn't exist on CentOS 5 via Yum

I was trying to install openvz on a CentOS box today by following the instructions on the wiki
http://wiki.openvz.org/Quick_installation but yum was unable to see a ovzkernel-smp package.

I installed the PAE package instead, and that worked fine (I only have 2GB of RAM, so I don't
need the PAE stuff.) This isn't a major issue for me, but if something's changed you might want to
update the wiki with new instructions.

Thanks,
Corey
