Very nice!!

I noticed a few things:

I can not seem to remove an IP address. I selected an IP when I created a Debian node, then added another. When I try to remove the first one it does not appear in the list.

At some point, I somehow triggered a help box to appear, which covered about half the menus. I could not make it go away.

Is it possible to make it run on Debian?

It it possible to create users who have limited access to only certian features, nodes and actions?

Great work, thanks!
