kir wrote on Wed, 21 December 2005 08:04: Just create a new partition, mount it to, say, /vz.new and then copy all data from /vz to /vz.new using cp -a.

Then, umount /vz.new, remove everything from /vz and mount new partition to /vz.

Hi there, if right now

```
Quote:Filesystem      Size  Used Avail Use% Mounted on
/dev/sda2             221G  28G 183G  13% /
/dev/sda1              965M   42M 874M   5% /boot
tmpfs                 1013M    0 1013M   0% /dev/shm
```

This is what I have, how can I create a partition from an existing mounted partition?
