User umount unfortunately still doesn't work if the kernel doesn't have the unprivileged mount support but as we discussed this in last July that shouldn't be needed for this case.

```
% mount -t ntfs-3g /dev/hda10 /tmp/test
% cat /proc/mounts | grep /tmp/test
/dev/hda10 /tmp/test fuseblk rw,nosuid,nodev,user_id=501,group_id=501,allow_other 0 0
% mount | grep /tmp/test
/dev/hda10 on /tmp/test type fuseblk (rw,nosuid,nodev,allow_other,blksize=1024,user=szaka)
% umount /tmp/test
umount: /dev/hda10: not mounted
umount: /tmp/test: must be superuser to umount
umount: /dev/hda10: not mounted
umount: /tmp/test: must be superuser to umount
```
