Hi, it sounds like you have your VE IPs aliased to the hardware node. when you run ifconfig on your hardware node, you should not see the IPs which you want assigned to your VE. If you see them, remove them and add to the VE as follows:

vzctl set <VEID> --ipadd x.x.x.x --save

If you still have a problem, reply back with:

ifconfig;route -n;vzlist -a
