Subject: Re: Problem with NFS client from a VE
Posted by jmelyn on Mon, 21 Jan 2008 12:40:35 GMT

Sorry to answer so lately. I'm implied on several projects so I'm not working much on each.

It was a template problem cause I have CentOS 5 minimal and default files and for the VE I was working on, I installed the minimal version.

How is it possible to know the template name the VE is based on?

Anyway, thanks to all of those who replied to my questions.
