Afrer server rebooting all is clear. But if there are some VPSs under loading (8 in my case against Apache benchmark testing) this problem appears in dmesg.

If it is one VPS overriding allocated resourses (I check it in /proc/user_beancounters) then a very big problem appears. VPS is hang, I cannot stop it (timeout is out), I cannot stop /etc/init.d/vz - the same reason, I cannot properly reboot the server - I think the same => the whole server is hang .
