As I already said, these are fixed in -mm tree with the
pid-namespaces-vs-locks-interaction.patch patch.

What really bothers me in this case is that in the "output"
file you attached I see

<<<test_output>>>

```

syslog08 0 INFO : Test all the facilities at a particular level.
syslog08 0 INFO : Facilities available are: LOG_KERN, LOG_USER, LOG_MAIL
syslog08 0 INFO : LOG_DAEMON, LOG_AUTH, LOG_LPR.
syslog08 0 INFO : Don't know how to send kernel messages from syslog()
syslog08 0 INFO : o Create seperate entries in config file for each facility.
syslog08 0 INFO : o Send the message and grep for the entry in log file.

syslog08 0 INFO : syslog: Testing all the facilities

syslog08 0 INFO : Doing facility: user...
syslog08 0 INFO : Restart /etc/init.d/syslog
syslog08 0 INFO : Facility user passed
syslog08 0 INFO : Doing facility: mail...
syslog08 0 INFO : Restart /etc/init.d/syslog
syslog08 0 INFO : Facility mail failed
syslog08 0 INFO : Doing facility: daemon...
syslog08 0 INFO : Restart /etc/init.d/syslog
syslog08 0 INFO : Facility daemon passed
syslog08 0 INFO : Doing facility: auth...
syslog08 0 INFO : Restart /etc/init.d/syslog
syslog08 0 INFO : Facility auth passed
syslog08 0 INFO : Doing facility: lpr...
syslog08 0 INFO : Restart /etc/init.d/syslog
syslog08 0 INFO : Facility lpr passed
syslog08 1 PASS : some facilities failed to work
syslog08 0 INFO : restart /etc/init.d/syslog

```

The says it passed, but the status is "some facilities failed to work" and the log file says that the test failed %)

I launched ltp on my box but the 01, 02 and 08 syslog tests passed... I have a CentOS 4 setup on this node, maybe this is a SuSE issue? Rishikesh, can you try this on another OS?
