Hi,

Quote:also commands are not there I think you need appropriate packages: for example on my Fedora node \$rpm -qf `which getfacl` acl-2.2.39-3.1.fc7

Quote:Well ... i guess ACL is not implemented in this kind of kernels, am I right? I've experimented with ACL a little time on my node. So I guess that it is possible to use ACL on VPS but I've spent a very little time to affirm this issue for sure.

I'll be very appreciate you if try to use ACL inside VPS and if something will be wrong please report a problem there. Many thanks you!
