Hi,

1.Quote:I use CentOS

Is it your HN or VPS? Please specify the ostemplate of your VPS.

2. rpm -qa | grep acl (on HN and inside VPS)

3. if you have yum installed on your system you can simply do:

# yum install acl (on HN) - to install acl package on HN

vzyum <VE\_ID> install acl (on HN) - to install acl package to your VPS's with VPS ID = <VE\_ID>.
