AFAIK ICH9 is not supported by 2.6.18 vanilla kernel
From grepping kernel changelogs it looks like
ICH9 May have support starting from 2.6.20,
while 2.6.19 has a couple of ICH9 introducing patches, but not full support. While 2.6.18 and
earlier has no mention of ICH9 at all.

 This makes openvz not usable for new ICH9 , while this is 90%
of intel based booards that on the market.
You could use 2.6.22 but it does not have checkpointng support &
live migration.

 The same problem is with vanilla Xen 3.1 & 3.2 which also still in
2.6.18, but many distros have ported xen patches to newer kernels.
