piavlo wrote on Thu, 31 January 2008 07:20 By the way i have AHCI disabled in the bios since then i enable
it , then system powers on the first thing it does is staring the AHCI bios where it gets stuck for 5-10 minutes and then it continues normally. Do you have an idea what might be wrong, maybe i to change something else in the bios?

 Regarding the backported RH patch , where can i get this separate backport only patch?

 Thanks
we didn't experience it, i would try to upgrade bios, change cables, connect disks to other ports etc.

thers no separate patch for ahci, you have to go for full rhel package or do it yourself
