[Box reboots with 2.6.24-openvz from git after
Initiating processor 0]

Doh! It was indeed descriptors moving in GDT.

The following should fix it:

```
git diff v2.6.24.. -- arch/x86/boot/compressed/head_64.S arch/x86/kernel/acpi/wakeup_64.S  
arch/x86/kernel/head_64.S include/asm-x86/segment_64.h >../1.patch  
patch -p1 -R <../1.patch
```
