Hello,

We have the following modules listed in /etc/sysconfig/iptables-config in the hardware node.

IPTABLES_MODULES="ipt_REJECT ipt_tos ipt_TOS ipt_LOG ip_conntrack ipt_limit ipt_multiport iptable_filter iptable_mangle ipt_TCPMSS ipt_tcpmss ipt_ttl ipt_length ipt_state iptable_nat ip_nat_ftp"

A user adding a rule such as the one given below,

iptables -A INPUT -p tcp -i venet0 -m state --state NEW --dport 22 -m recent --update --seconds 15 -j DROP

results in,

[root@vps /]# iptables -A INPUT -p tcp -i venet0 -m state --state NEW --dport 22 -m recent --update --seconds 15 -j DROP
iptables: No chain/target/match by that name

Is there any other module we have left out ? Any help is much appreciated. Thanks
