Alright, ive read the PDF but it doesnt go into detail how to make a mount script... do i just create 300.mount in /etc/vz/conf and put
mount --bind /vz/private/200/home/xxx /vz2/private/root/300/home/xxx

and it will run that script on boot? if thats the case please let me know or if not let me know how i can have it mount /vz/private/200/home/xxx to /vz2/private/root/300/home/xxx
