The best way to troubleshoot it would be to check everything:

1. Are you indeed in group «admins» ("id" should tell).
2. Is /etc/sudoers set up so users from «admins» group can use sudo
3. Is there anything bad in system logs (/var/log/messages I guess)?

If the above won't help, try to strace/ltrace sudo invocation and see what's wrong (or post the details here).

PS I will try to reproduce the issue myself when I have time (in a few days I think).
