Subject: Shutdown of VE affects interface on HW-node?
Posted by Skillshot on Thu, 07 Feb 2008 08:41:40 GMT

Hi all,

i've got OpenVZ running from 2.6.24-git (yesterday) and i am encountering a strange problem: if i shutdown my VE the network interface on the HW-node goes down. The interfaces in the config files are correct, the up/down scripts from /etc/vz/dists/scripts seem ok, too and if i boot into 2.6.22-openvz005 everything is fine ...

Thx for any info!
