I just downloaded the latest version from jit with:

```
git clone git://git.openvz.org/pub/linux-2.6.24-openvz
linux-2.6.24-openvz.org
```

(hope that is correct)

configuration, compilation worked without problem (compiling for amd64).

but when i try to start a VE I get the following error:

any idea whats wrong?

```
> vzctl start 101
```

```
