Subject: MAX_ULONG value
Posted by jmelyn on Fri, 08 Feb 2008 16:06:33 GMT

Hello,

I'm trying to understand /proc/user_beancounters file and conf files. There are some very big numbers (I'm in 64 bit installation) and I've just read they are MAX_ULONG. In my case, MAX_ULONG should be: 18446744073709551615 (/usr/include/limits.h), but it is only: 9223372036854775807. It is (signed) MAX_LONG. Same thing with 32 bit values...

Do I miss something?
