---

I have the following setup:

directory /abc on the HW node

and a mount file for VE 2020

```
mount -n -o ro --bind /abc /vz/root/2020/home/backup/files
```

when I enter the VE and go to /home/backup/files, I see the content of /abc

when I log in to the VE with sftp (from a remote machine), I see /home/backup/files, I see the other files in /home/backup, but when I step in /home/backup/files/, the directory appears empty.

All files being chmod'ed to 777 to allow easy testing

Any ideas what to look at / for?
