---

I am using Debian GNU/Linux Lenny with kernel  
2.6.18-8.1.14.el5.028stab045.1 (x86\_64). The VEs are on an XFS file  
system.

When stopping a VE with vzctl stop, the kernel oopsed in  
shrink\_dcache\_for\_umount and the box completely hung with this backtrace.  
<http://artipc10.vub.ac.be/files/openvz-oops.jpeg>

Is this is a known problem?
