I did a --split 5 of HN
?

Hi maratrus

I created the VE with this command:

```
vzctl create 249034 --ostemplate centos-4-i386-minimal --config split5
```

I know how increase the barrier and limit of privvmpages but Im confused about which values I need to setup to avoid failcnt troubles. Increasingly the barrier and limit of VE to assign about 256MB more each time? Im not sure if Im explaining me good excuse me.

Thanks.
