Quote:
Q. My node is unaccessible through the network after reboot...

A. You need to check your firewall rules. The problem is that default stateful firewall rules are not available on the host system. To make this functionality available, load the ip_conntrack module with the additional parameter "ip_conntrack_enable_ve0=1". However, this method is highly not recommended because tracking all the connection on the host system lead to performance degradation, more memory usage and also may lead to the total server inaccessibility due to reaching of the overall connection limit.

In latests kernels this behaviour was changed and conntracks are enabled in host system by default.
