thanks! just got out yesterday

here we go:

# rpm -qa | grep ssh
openssh-server-4.3p2-16.el5
rssh-2.3.2-1.2.el5.rf
openssh-4.3p2-16.el5
openssh-clients-4.3p2-16.el5

I'm running CentOS 5, using the minimal template from this site. And the HN is CentOS 5 too.

Is it possible that some of the rights that exist when logging with ssh get dropped / lost when moving to sftp? (just a random guess)
