
Subject: Fedora 8 vzcpt problem

Posted by [adm1329](#) on Fri, 22 Feb 2008 17:35:02 GMT

[View Forum Message](#) <> [Reply to Message](#)

When I try to do a live migration, I get the following

```
[root@openvz2 ~]# vzmigrate --online 10.6.200.13 222
OPT:--online
OPT:10.6.200.13
Starting online migration of VE 222 on 10.6.200.13
Error: vzcpt module is not loaded on the source node
Error: Can't continue online migration
```

The local system is Fedora 8, the destination system is CentOS 5.

I had a similar problem with the destination system not wanting to do a vzdump because of vzcpt not being loaded. I tried loading vzcpt the same way I did on the destination system, and this is what I get.

```
[root@openvz2 ~]# modprobe vzcpt
WARNING: Error inserting ip_conntrack
(/lib/modules/2.6.18-53.1.6.el5.028stab053.6/kernel/net/ipv4/netfilter/ip_conntrack.ko): Unknown
symbol in module, or unknown parameter (see dmesg)
FATAL: Error inserting vzcpt
(/lib/modules/2.6.18-53.1.6.el5.028stab053.6/kernel/kernel/cpt/vzcpt.ko): Unknown symbol in
module, or unknown parameter (see dmesg)
```

Here is the dmesg output.

```
