Well, I'll tell you what I've done, and then we can try to figure out why end up not having the drbd module:

My system is Debian Etch.

First scenario:

I installed the kernel from

```
wget http://download.openvz.org/kernel/branches/2.6.18/028stab053  
.5/kernel-enterprise-2.6.18-ovz028stab053.5.i686.rpm  
alien -k -d kernel-enterprise-2.6.18-ovz028stab053.5.i686.rpm  
dpkg -i kernel-enterprise_2.6.18-ovz028stab053.5_i386.deb
```

find /lib/modules/ uname -r` -name "drbd*"

... does not return any files.

... whereas when 028stab039.1-enterprise is installed, they do show:

```
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/include /linux/drbd_config.h  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/include /linux/drbd_tag_magic.h  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/include /linux/drbd_nl.h  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/include /linux/drbd_limits.h  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/include /linux/drbd.h  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/include /config/blk/dev/drbd.h  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/build/drivers /block/drbd  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/kernel/drivers/block/drbd  
/lib/modules/2.6.18-ovz028stab039.1-enterprise/kernel/drivers/block/drbd.ko
```

Second scenario:

I have the following mirror in my apt sources.list:

```
deb http://debian.systs.org/ etch openvz
```

and do:

```
aptitude install linux-image-2.6.18-ovz-028stab051.1-enterprise
```

... and drbd module not listed with 'find' as above.

So, What am I doing wrong?

Best regards,
Gustavo.
