Hi,

* in Debian the drbd Modules are shipped in seperates packages, so there's no need to built in kernel packages

* in Debian Stable (ETCH) the drbd version is a 0.7 but OpenVZ kernels have built in the drbd0.8
-> you need a backported testing drbd-utils packages !

So at debian.systs.org the OpenVZ kernel packages have no drbd module inside!

For a drbd kernel module on Debian OpenVZ :

Fetch the etch (4.0) or backported lenny (4.1) drbd module packages and built the kernel modul!
