Hello,

Everything seems to run correctly. But I have a question on the Linux version: It is the same on host and guest.

Host OS (uname -a):

```
Linux cs-936-dev1 2.6.18-53.1.6.el5.028stab053.6 #1 SMP Mon Feb 11 20:14:31 MSK 2008  
x86_64 x86_64 x86_64 GNU/Linux
```

This is normal.

Guest OS (uname -a):

```
Linux cs-936-vz01 2.6.18-53.1.6.el5.028stab053.6 #1 SMP Mon Feb 11 20:14:31 MSK 2008  
x86_64 x86_64 x86_64 GNU/Linux
```

This is curious as it is the host kernel.

If I run the command `rpm -qa | grep kernel-2` in guest, I have:

```
kernel-2.6.18-53.1.13.el5
```

```
kernel-2.6.18-53.1.4.el5
```

Is it normal or did I make a mistake while installing?
