hi

sorry for the delay, have only just got back to being able to look at this. When execute that command i get this

```
# rpm -q --whatprovides kernel
dummy-fedora-core-4-1.0-4.swsoft
```

i then try

```
rpm -e dummy-fedora-core-4-1.0-4.swsoft
```

to which i get these errors.

error: Failed dependencies:

```
  ethtool >= 1.8-2 is needed by (installed) initscripts-8.54.1-1.i386
  mingetty is needed by (installed) initscripts-8.54.1-1.i386
  module-init-tools is needed by (installed) initscripts-8.54.1-1.i386
```

I installed the fedora template from the community created section so i guess it is a problem with this. On the plus side i downloaded the source imagemagick and forced the install and we can now use the functions we wanted. Would be nice to know how to get round this in future though
