Subject: Re: trying to install image magick via yum i get error Error: hal conflicts with kernel < 2.6.17
Posted by slonghurst on Wed, 27 Feb 2008 14:16:13 GMT

hi

sorry for the delay, have only just got back to being able to look at this. When execute that command i get this

rpm -q --whatprovides kernel
dummy-fedora-core-4-1.0-4.swsoft

i then try

 rpm -e dummy-fedora-core-4-1.0-4.swsoft

to which i get these errors.

error: Failed dependencies:
      ethtool >= 1.8-2 is needed by (installed) initscripts-8.54.1-1.i386
      mingetty is needed by (installed) initscripts-8.54.1-1.i386
      module-init-tools is needed by (installed) initscripts-8.54.1-1.i386

I installed the fedora template from the community created section so i guesss it is a problem with this. On the plus side i downloaded the source imagemagick and forced the install and we can now use the functions we wanted. Would be nice to know how to get round this in future though
