It's a pity there is no reply. Maybe the answer is obvious but I don't know it. And I've got a look at the documentation without finding anything pertinent.

To get a more general question, I would write: How select the kernel I want to boot on? Here there are the kernel-2.6.18-53.1.4.el5 and the 2.6.18-53.1.13.el5 versions. I suppose grub is not used to boot the guest...

Thanx in advance for any reply.
