Please post output from this script in VE0 after fresh boot on .18 and .24 kernels:

```
for i in $(ls /proc/sys/net/ipv4/conf/*/forwarding); do
    echo $i
    cat $i
done
```

and in VE too, just in case. Does Etch runs sysctl init script before starting netdevices in both cases?

Regardless, relying on "default" is not wise, because you're on mercy of init scripts ordering.  
I'd suggest net.ipv4.conf.all.forwarding=1 or net.ipv4.ip\_forward=1.
