Kir,

It is a new feature.

usage: /usr/bin/vzdump OPTIONS [--all | VPSID]

- exclude VPSID       exclude VPSID (assumes --all)
- exclude-path REGEX   exclude certain files/directories
- compress            compress dump file (gzip)
- dumpdir DIR         store resulting files in DIR
- xdelta              create differential backup using xdelta
- mailto EMAIL        send notification mail to EMAIL.
- stop                stop/start VPS if running
- suspend             suspend/resume VPS when running
- snapshot            use LVM snapshot when running
- restore FILENAME    restore FILENAME
