Kir,

It is a new feature.

usage: /usr/bin/vzdump OPTIONS [--all | VPSID]

--exclude VPSID       exclude VPSID (assumes --all)  
--exclude-path REGEX   exclude certain files/directories  
--compress            compress dump file (gzip)  
--dumpdir DIR         store resulting files in DIR  
--xdelta               create differential backup using xdelta  
--mailto EMAIL         send notification mail to EMAIL.  
--stop                 stop/start VPS if running  
--suspend              suspend/resume VPS when running  
--snapshot             use LVM snapshot when running  
--restore FILENAME     restore FILENAME
