Subject: Oops. How do i find out what it means.
Posted by vobiscum on Sat, 22 Apr 2006 05:20:31 GMT

I was attempting to shut down a VPS with vzctl and I got the following message:

Message from syslogd@corbusier at Sat Apr 22 15:08:21 2006 ...
corbusier kernel: Oops: 0000 [1]

Message from syslogd@corbusier at Sat Apr 22 15:08:21 2006 ...
corbusier kernel: CR2: ffff820401003128

What does this mean? I have had problems with the server crashing using the previous patch
(026test005). However the current patch has been running for a day without any real problems.

I am using using kernel.org 2.6.16 patched with 026test009 running on an athlon 64. I am using
debian, with vzctl 3.0.0 ported using alien.
