
Subject: Asterisk g729a license in OpenVZ VE

Trying to install a g729a codec license for Asterisk in a VE. In order for the license program to work the license program wants to read the eth0 device. I think it's looking for the MAC address. So I'm thinking if there's a way to make eth0 device visible to the VE then the license will install.

So - can I do this? If so - how?

Thanks in advance.
