Thanks!

Could you please tell me how to examine "rlimit"? Is it in the /proc/user_beancounters? I can only find VE 101 - 149 in the file because the 150 can not start, and for the HW node resource consumption, I list it below:
It seems all failcnt is zero.

uid	resource	held	maxheld	barrier	limit	failcnt
0:	kmemsize	8428030	9395737	2147483647	2147483647	0
