Yes, the output of ulimit -a is:

```
core file size      (blocks, -c) 0
data seg size       (kbytes, -d) unlimited
max nice            (-e) 0
file size           (blocks, -f) unlimited
pending signals     (-i) unlimited
max locked memory   (kbytes, -l) unlimited
max memory size     (kbytes, -m) unlimited
open files          (-n) 1024
pipe size           (512 bytes, -p) 8
POSIX message queues (bytes, -q) unlimited
max rt priority     (-r) 0
stack size          (kbytes, -s) 8192
cpu time            (seconds, -t) unlimited
max user processes  (-u) unlimited
virtual memory      (kbytes, -v) unlimited
file locks          (-x) unlimited
```

I tried to stop 15 VEs, but it seems that the output of it does not change.

Thanks!
