This looks good. Can you

- (1) make it optional, i.e. retain the old behavior by default and provide a way to turn init logging on (command-line switch, or VE config parameter)
- (2) make init-logger so it would not depend on perl being available inside the container; i guess it can be rewritten in shell as /bin/sh should be there
- (3) add the comment to init-logger saying that this file was copied from the host system to this container and so any changes made to it inside a container will be lost during the next container start
- (4) document it all
- (5) add init-logger to the vzctl.spec file
