
Subject: Systemabsturz

Posted by [Hurlyburly](#) on Thu, 13 Mar 2008 13:08:15 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hallo,

nach ca. 4 Monaten Uptime hatte ich heute morgen einen (für mich) unerklärlichen Systemabsturz. Kann mir jemand anhand des beigefügten Auszugs aus /var/log/syslog sagen, wo das Problem herkommt, bzw. wie ich es künftig vermeiden kann?

Ich nutze Kernel 2.6.18-1-openvz unter Debian Etch auf einem System mit

Xeon Quad Core 3220 2,40GHz 8MB FSB1066,
Supermicro Mainboard PDSMI+
4096 MB ECC DRR2 667-RAM ATP (4x 1024 MB)
3Ware Raid Controller 9650-2LP mit 2 x 320 GB SATA II Western Digital

Ein RAM-Check mit Memtester lieferte keine Fehler.

----- /var/log/syslog -----
