Subject: On boot adjustment for /etc/hosts

We need to adjust the /etc/hosts file during reboot. OpenVZ has default settings, for example:

127.0.0.1 localhost.localdomain localhost
Auto-generated hostname. Please do not remove this comment.
192.168.0.247 test2

What we want is that this is automatically set to, for example:

127.0.0.1 localhost test2.domain.com test2 localhost.localdomain
Auto-generated hostname. Please do not remove this comment.
192.168.0.247 test2

Can someone tell me how can do this?

Kind regards,
Jurgen
