Subject: oomguarpages instead of privvmpages for meminfo?
Posted by TheWiseOne on Thu, 20 Mar 2008 21:50:38 GMT

Wouldn't it make sense to have the virtualized meminfo use oomguarpages for the usage rather than privvmpages? This should give a clearer figure for real RAM usage. I suppose this could be made as another mode to the meminfo option, such as oomguarpages:value to track oomguarpages as used memory and value as the max memory in pages.
