Subject: wget issue for long requests

I'm not 100% sure this is an issue with wget or apache, but here's what's happening:

I have an application that has some reports that run once a week that take some time to run (let's say 2 hours). There is usually no output until pretty much the end of the time it takes, as up to that point it's crunching a huge query. I also have reports that run daily, which take under a second to a minute to run. All of the reports are emailed out by executing a wget through a cron job. The daily reports go out with out issue, however with the weekly reports, the wget never finishes.

Now, with this in mind, I thought maybe a time out issue or something of the sort, but increasing (or removing) that has no effect. What makes this even harder to understand is that the output file has all the contents of the report, but again, doesn't complete.

in-case it matters, here's my conf file for the ve:
