Subject: Kernel 2.6.24 no UDP Ports opens
Posted by strikegun on Thu, 27 Mar 2008 01:15:47 GMT

Hi,
I am running a 2.6.24 Vanilla Kernel with the OpenVZ Patch.
If start on the VE asterisk the sip-module is unable to create
the udp 5060 port.
On the same host with a 2.6.18 and OpenVZ it works in the VE.

Any Idea? Did I miss a kernel configuration?

thx
Richy
