Matt,

this messages points to missed decrement of the reference counter on netdevice. in old case it was caused by accessing to /proc/net/anycast6 file and was fixed long time ago. New issue have the same behaviour but obviously have some another reasons.

btw. you can look at the kernel sources via <http://git.openvz.org>
It lacks last changes, but I believe it will be fixed soon.

Thank you,
Vasily Averin
