## Greetings,

I'm hosting a gallery (http://gallery.menalto.com/) for my family and the directory that it stores its data in is called entity.

However, for some reason inside my vz I can't do an Is or a tar on the directory without getting an error. I have shutdown apache and mysql and still get the error.

box1:/home/steve/entity/2/2# Is -al Is: reading directory .: Input/output error total 728

tar complains about the bad descriptor and corruption.

The gallery works fine and are no problems. I think this maybe a vz problem.

Linux box1 2.6.8-022stab070.1-enterprise #1 SMP Mon Feb 20 19:31:28 MSK 2006 i686 GNU/Linux

I want to upgrade the machine and move it over to another server but I can't finish rsyncing my vz because of this. Any help would be appreciated.
