Subject: Change container ID on the fly?
Posted by shuaib85 on Wed, 02 Apr 2008 14:53:55 GMT

Dear folks

I was migrating one container from machine to another and accidentally i found that there are two similar container ID on the two machines e.g. 101 on both machines. Migration does not allow migrating a container if the same ID on the other machine exists.

Just wondering about how to change the container that on the fly if possible. If not what are the other solutions?

Thanks
