Subject: Re: networking on LFS based distro
Posted by liamr on Tue, 25 Apr 2006 16:18:52 GMT

From the host system..

```
simlish-root#  cat /proc/sys/net/ipv4/ip_forward
1
```

So, ip forwarding should be enabled.

Inside the vps...

```
bash-2.05b# ip r a default via 191.255.255.1 dev venet0
RTNETLINK answers: Network is unreachable
```

I created an addition vps based on the centos template as you suggested.. networking works there.
