Ok rickb but that's what I did

I first installed the kernel-smp-2.6.18-ovz028stab053.5.i686.rpm kernel on the node. Then I reboot on this kernel.

I download the vanilla source code 2.6.18 (kernel.org) then I applied the openvz patch :
patch-ovz028stab053.5-combined.gz

And I finally use Lustre source code (1.6.4.3) to make the rpms for the client (patchless method)

Am I wrong doing that?
